

## Collar Microphone (MIC 085)

### Instructions For Use & Care

---

*The MIC 085 can be worn under a collared shirt for a less visibility.*

Note: When speaking, remember to talk into the microphone! The MIC 085 will move naturally with your body, but it will not follow your head movement.

#### **When using the collar mic with a wireless speaker system:**

You can avoid feedback by following these general guidelines:

- 1) Place the speakers at the front of the room with the sound directed towards the audience.
- 2) Do not place the *speaker(s)* at the same height as the microphone. Higher is best, pointing in a slightly downward position.
- 3) Adjust the speaker volume for a natural-sounding, comfortable speaking level.
- 4) Never walk directly underneath or in front of a speaker while using the MIC 085. Generally, keep 3-6 feet from the speaker to avoid the possibility of feedback.

**Thank you for purchasing the MIC 085 Collar Microphone from Williams Sound. This product is designed to comfortably wear around your neck, allowing you to move around naturally with less obstruction than a traditional headset microphone.**

#### **Instructions:**

Adjust the flexible gooseneck of the MIC 085 to wrap comfortably around your neck. Bring the microphone around your left shoulder and allow the cable to run down your right shoulder. Position the microphone element 1-2" from your mouth. Plug the cable into the transmitter jack.
